

MP FERTILITY[™]
AND TEST TUBE BABY CENTER
AN ISO 9001-2015 COMPANY

MIRACLES DO **HAPPEN**

About Us

Established in 2015, MP Fertility Center is one of the best IVF center in Central India that offers a full range of infertility treatment options for couples that wish to start a family. MP Fertility Center has successfully treated many infertile couples upto 55 years of age and is striving to provide best success rate in IVF at most affordable rates. MP Fertility Center has been awarded as “Most Economical and Best IVF Center in Central India” – 2017 by CM Shri Shivraj Singh Chouhan and 2019 by CM Shri Kamalnath.

We believe every couple have the right to get the treatment, but when it comes to IVF the affordability is the main concern. We understand the mental situation of childless couple – hence we provide the most economical and affordable treatment for IVF. MP Fertility Center is also listed as Top 3 Fertility Clinics in Indore for the last 4 years in a row viz. 2019 to 2022 by none other than Three Best Rated.

IVF BABIES
DELIVERED
*September 2022

Spreading Smiles With Little Miracles

With more than 900+ IVF babies delivered through our advanced treatment, we are creating happy stories.

Dr. Malika Jain Doshi

MBBS, DGO, FIOG (Mumbai)
(IVF Specialist)

Dr. Malika started her career as infertility specialist in 2011 in Mumbai under Dr. Prakash Trivedi. Later she moved to Indore to set up and start the new chapter of her life – MP Fertility Center. Her patients loves the way she explains and counsel them. She is an avid reader about latest IVF practices and advancements around the world. That's the reason she makes tailor made protocols for each patient – indeed which is the back bone of MP Fertility Center for such a high success rate.

With more than 40 years of experience, Dr. Pratibha has a very fine hand in obstetric surgeries and very good diagnostics skills. She had dedicatedly served MP Government for 30 long years starting the career as fresher doctor at Dhar Civil Hospital to Class 1 doctor at Indore Civil Hospital, the time she got retired. Post infertility treatment by Dr. Malika, she takes care upto delivering the baby in the hands.

Dr. Pratibha Doshi

MBBS, MS
(Obstetrician and Gynecologist)

Luv Doshi

B.Tech. & M.Tech., IIT Bombay

Started his career as an structural engineer then moved to IVF industry in 2015 to manage MP IVF. With keen interest in embryology he is pursuing masters in the field. He leads the overall growth, expansion and management of the center.

- Affordable fees and no upfront payment
- Awarded as top 3 IVF Center in Indore (among 25+ centers) for 4 continuous years.
- All expertise in-house (IVF lab, embryologist etc.)
- Transparent and tailor made treatment for each patient

Frequently Asked Questions

1. What exactly is IVF / Test Tube Baby?

IVF / Test Tube Baby is a method of assisted reproductive technology (ART) in which eggs and sperm are combined outside the womb (uterus) in a specialized laboratory. The fertilized egg, or embryo is then transferred back into the woman's uterus.

2. Who should go for IVF Treatment?

- ▶ Low sperm counts or Nil sperms
- ▶ Endometriosis
- ▶ Blocked fallopian tubes
- ▶ Cyst in Uterus
- ▶ Ovulation disorders/Irregular periods
- ▶ Other health or unexplained reproductive issues

3. How long is the IVF process?

It typically takes 3-4 weeks to prepare for IVF, followed by a stimulation phase that entails about 8-10 days and an egg retrieval is performed 2 days later. After egg retrieval the fertilization is done using sperm in the lab. 3-5 days after fertilization the embryos are transferred into the woman's uterus. So in total approx. 2 months.

4. Is IVF painful?

Most patients do not report significant discomfort during the IVF process. Some women may feel bloating during the ovarian stimulation phase, and light bleeding or cramping may occur after egg retrieval.

5. Is IVF treatment expensive?

It is not cheap, IVF treatment involves the following

- ▶ imported hormones injections to prepare the eggs,
 - ▶ doctors team- IVF specialist, gynecologist, embryologist, andrologist, anaesthetist
 - ▶ IVF lab charges
 - ▶ OT charges, USG and some supporting medicines
- Covering all the above expenses and maintaining the quality of treatment, the cost of IVF is moderately high. However, we at MP IVF are thriving to minimize this cost and make it affordable.

6. What is the success rate of IVF?

The success rate of IVF depends on various factors viz. reasons for infertility, frozen or fresh embryo cycle, self or donor eggs and most importantly the age of the patient. Globally females under 35 years of age have 50% of success chances and it reduces with age.

7. What is the age limit of a patient to undergo IVF treatment?

As per Indian Government law the age of female has to be between 21 to 50 years and male between 21 to 55 years.

8. Are there any restrictions while undergoing IVF?

Smoking, drinking alcohol, chewing tobacco and vigorous exercise to name a few are prohibited, however you must discuss in detail with the doctor as per your case.

9. What to do after you get pregnant by IVF?

IVF pregnancy is very precious and must be given utmost care. The patient is advised to take the prescribed medications and consult an gynecologist who has experience of dealing with IVF pregnancies.
